FORMAT AND METHODOLOGY

The format and presentation of this report are consistent with provisions of Public Law 101-246 as amended by Public Law 108-447, and the methodology employed is the same as that used since the report’s inception.

The tables in this report provide a measurement of the voting coincidence of UN member countries with the United States. However, readers are cautioned about interpreting voting coincidence percentages. In Section III (General Assembly Overall Votes), Section IV (General Assembly Important Votes and Consensus Actions), and the Annex, the percentages in the last column of the tables, under “votes only,” are calculated using only votes on which both the United States and the other country in question voted Yes or No; not included are those instances when either state abstained or was absent. Abstentions and absences are often difficult to interpret, but they make a mathematical difference, sometimes significant, in the percentage results. The inclusion of the number of abstentions and absences in the tables of this report enables the reader to consider them in calculating voting coincidence percentages.

The percentages in the second-to-last column of the tables, under “including consensus,” offer another perspective on General Assembly activity. These figures, by presenting the percentage of voting coincidence with the United States after including consensus resolutions as additional identical votes, more accurately reflect the extent of cooperation and agreement in the General Assembly. Since not all states are equally active at the United Nations, the report credits to each country a portion of the 192 consensus resolutions based on its participation in the 97 recorded Plenary votes. Each country’s participation rate was calculated by dividing the number of Yes/No/Abstain votes it cast in the Plenary (i.e., the number of times it was not absent) by the total number of Plenary votes). However, this calculation assumes, for want of an attendance record, that all countries were present or absent for consensus resolutions in the same ratio as for recorded votes.

Moreover, the content of resolutions should be considered in interpreting the figures in either of the aforementioned columns. There may be overwhelming agreement with the U.S. position on a matter of less importance to the United States and less support for a resolution the U.S. considers more important. These differences are difficult to quantify and to present in two coincidence figures.
